

... we've also applied our 3D skills to entire urban landscapes. By combining photography and computer technology, we work with local authorities and property developers across the world to construct entire realistic City Models.

3D modelling enables us to create:

- video flythroughs of cities or particular neighbourhoods that can be used for promotion purposes
- detailed localised models to support planners in reviewing proposed developments
- simplified models that can be used to review proposals for urban development projects.

Virtual Viewing City Models support developers and planners in a range of key activities, including:

- urban planning
- consultation processes
- tourism and regional promotion.

**3D modelling: bringing life to the screen – and bringing the screen to life.**

**...to entire city environments.**
